Programmes and courses in global sexual and reproductive health

Sociocultural conditions influence reproductive health, as well as children's living conditions and health. From an international perspective, women often have a vulnerable position with limited power and significant risks associated with pregnancy and childbirth. Children and youth's health problems varies greatly depending on age. The infancy years are the most vulnerable period, and infants requiring neonatal care constitute a particularly vulnerable group. Be involved and participate in the work around the health of mothers, children, and adolescents while improving gender equality.

PROGRAMMES

Master's Programme in Global Sexual and Reproductive Health 60 Credits

COURSES

Global Sexual and Reproductive Health and Rights
15 credits

Research Methods in Global Sexual and Reproductive Health and Rights
7.5 credits

Implementing Strategies for Quality Improvements in Health Care Settings
7.5 credits
